

Legend

	Broad Leaf Bamboo Cluster (Sasa)		Crape Myrtle (Lagerstroemia)		Deodar Cedar (Cedrus deodara)		False Heather (Cuphea hyssopifolia)		Sprenger Asparagus (Asparagus densiflorus 'Sprenger')
	Japanese Magnolia (Magnolia liliiflora)		Azalea (Azalea)		Japanese Black Pine (Pinus thunbergii)		Pomogranite (Punica granatum)		
	Camphor (Cinnamomum camphora)		Flowering Cherry (Prunus serrulata 'Kwanzan')		Heavenly Bamboo (Nandina domestica)		Redwood (Sequoia sempervirens)		Wisteria
	Leather Fern (Rumohra adiantiformis)		Indian Hawthorne (Raphiolepis indica)		Japanese Pittosporum (Pittosporum tobria)		Lilyturf (Liriope spicata)		Creeping Periwinkle (Vinca minor) Groundcover
	Golden Bamboo Cluster (Phyllostachys aurea)		Japanese Maple (Acer palmatum)		Juniper 'Old Gold' (Juniperus spp.)		Baran (Aspidistra elatior)		Rock Groundcover
	Matake Bamboo Cluster (Matake)		Dwarf Mondo Grass (Ophiopogon japonicus)		Sasanqua Camellia (Camellia sasanqua)		Golden Rain Tree (Koelreuteria paniculata)		Donated Penstemon
	Victorian Box (Pittosporum undulatum)		Evergreen Pear (Pyrus kawakamii)		Japanese Camellia (Camellia japonica)		Japanese Holly (Ilex crenata)		Lantern or similar element
	Miniature Japanese Juniper (Juniperus procumbens 'Nana')		Fortnight Lily (Dieties iridioides)		Japanese Elm (Ulmus Davidiana Var. Japonica)		Dwarf Sacred Bamboo (Nandina domestica 'Nana')		

Garden in Brief

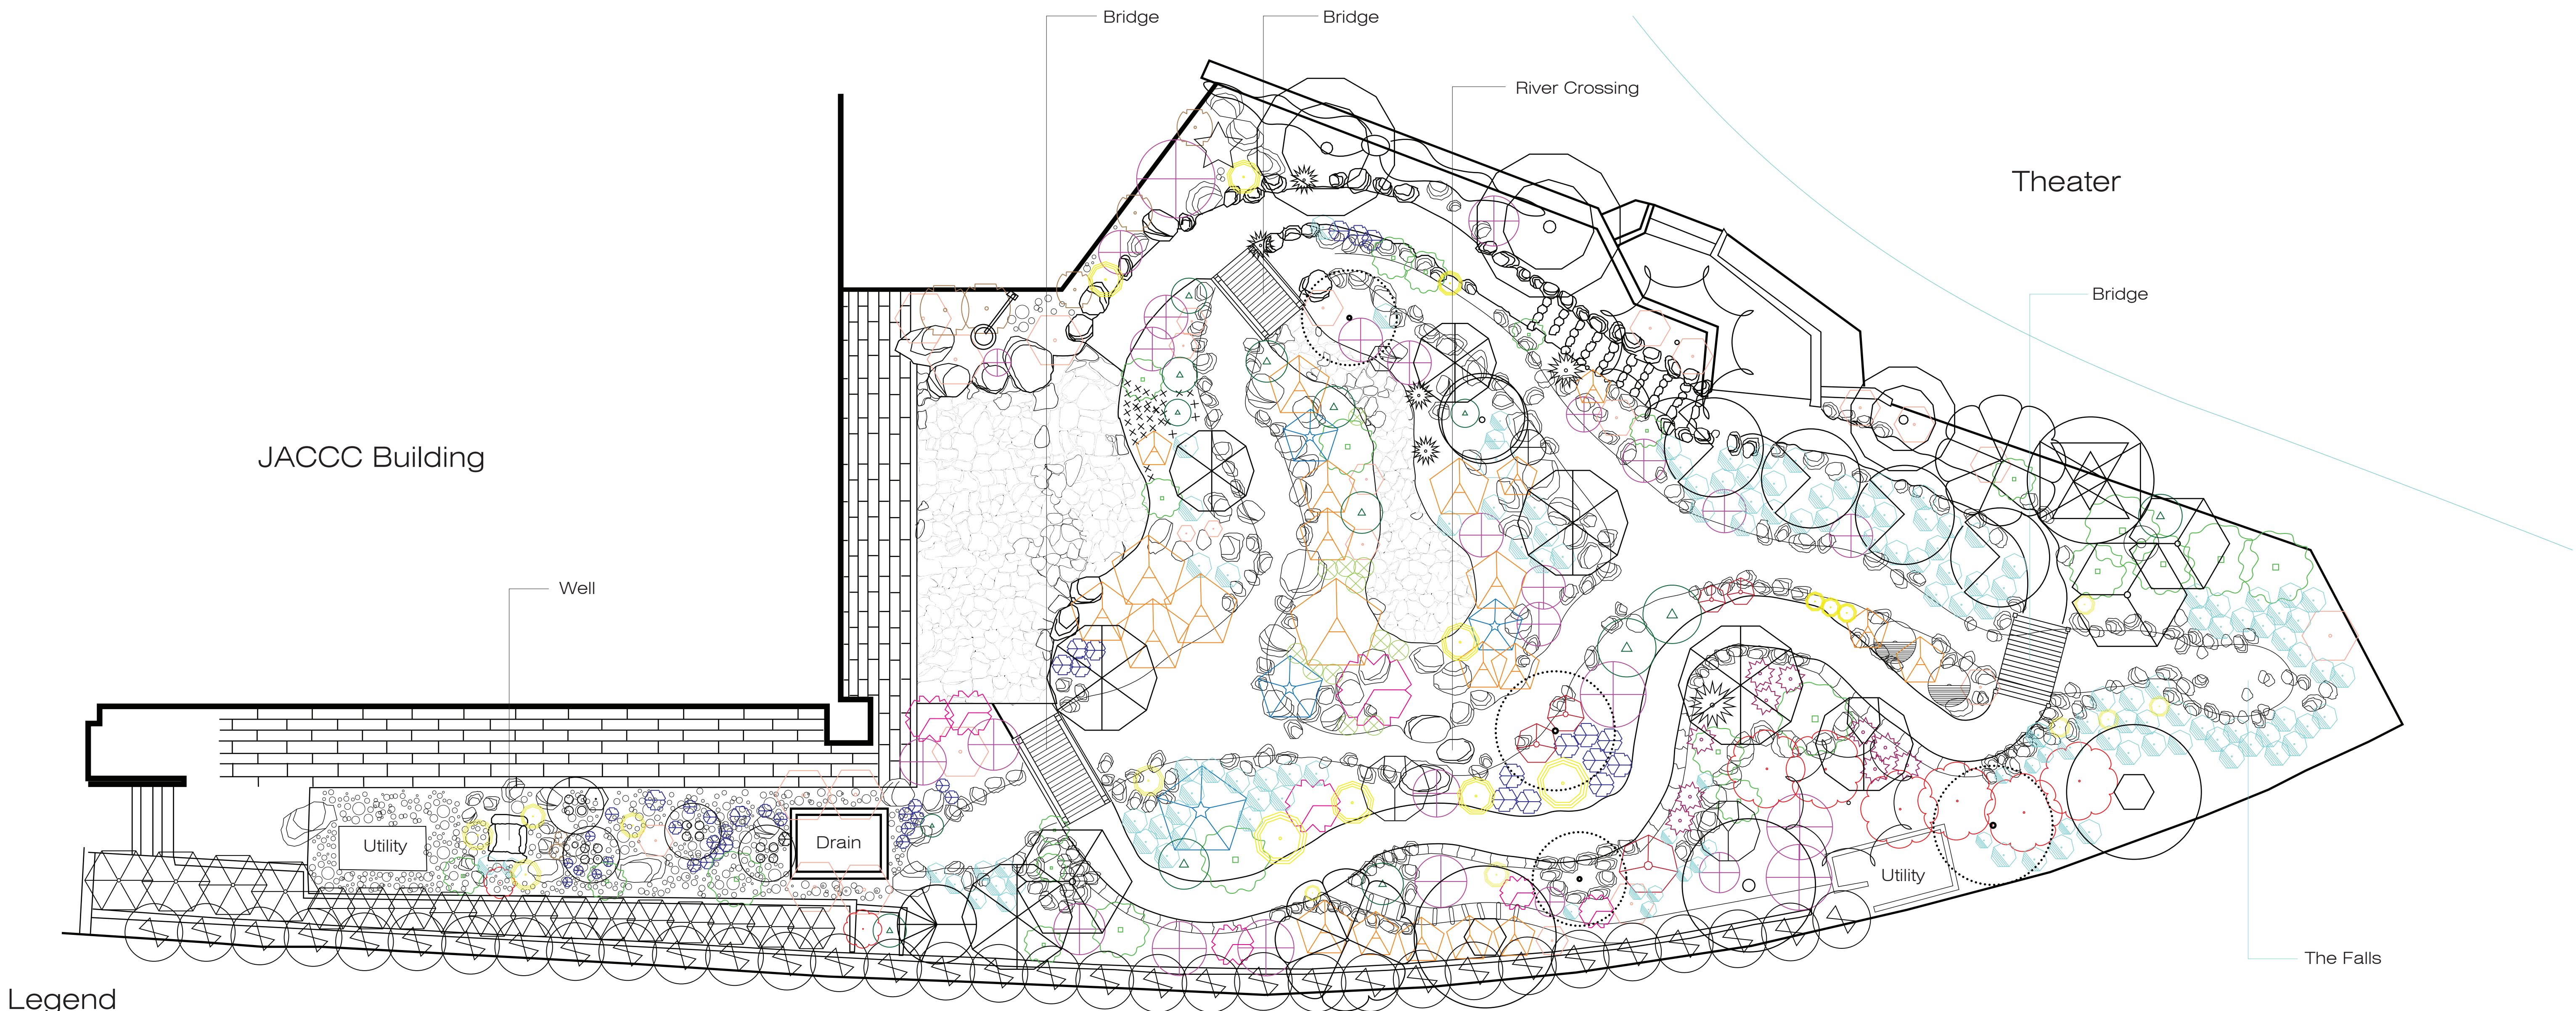

The Japanese word for family is 'katei', which translates to 'house' and 'garden.' It indicates the importance attached to the garden by a people who, over their 2000-year-old history, have believed in living in close harmony with nature. Thus, having a Japanese-style garden was an integral part of the plans for the JACCC in 1975.

George J. Doizaki, the JACCC's president since 1974, spearheaded the garden's development. Doizaki recieved help from renowned Landscape Architect, Takeo Uesugi, as well as the Southern California Gardeners' Federation (SCGF). The James Irvine Japanese Garden at the JACCC Los Angeles is a 8,500 square foot triangular garden that was built in the tradition of Japanese gardens.

From May of 1978 until the garden's completion in December of 1979, the JACCC Garden Committee met every second Saturday of each month, often staying unti 10 P.M. The meetings went over budgets, plans, manpower, and other issues. The projected cost of the garden was \$400,000, but an early contribution by the James Irvine Foundation of \$100,000, later followed by \$150,000, was an encouraging sign.

It was clear that the vision was coming to fruition but one obstacle still stood in the way, labor. The obstacle was soon overcome when more than 200 volunteers largely from the Southern California Gardener's Federation and community came together to labor nearly 3,000 manhours during the hottest days of the year.

All involved felt their labor of love pay off on December 16, 1979 when the garden was finally completed. An informal thank-you party was held the following year on March 2, 1980 and was attended by Mayor Tom Bradley who officially dedicated the garden and building. The garden later recieved the National Landscape Award from the American Association of Nurserymen, which was presented by Nancy Regan on September 14, 1981. The award stands as the nation's highest award for environmental improvement and community beautification.

Plant Symbolism and Uses in Japan

Baran
(Aspidistra elatior)

The Japanese use this broad-leaf plant typically in culinary settings. Baran is often seen in table-settings and often used to wrap food.

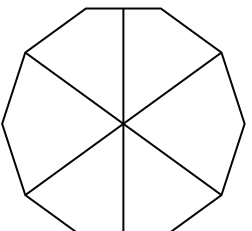

Flowering Cherry
Sakura / Yamazakura
山桜 (ヤマザクラ)
(Prunus serrulata
'Kwanzan')

The Flowering Cherry is a prominent symbol in Japan. It is often seen on Japanese Kimonos and confessionaries. The cherry symbolizes impermanence, and its dormancy is seen as just as beautiful as its blossoms. Functionally, the wood from cherries can be used to make a gray-colored charcoal and the leaves are often used to wrap mochi.

Manyoshu Connection: MYS VIII: 1440, MYS X: 1869 (<http://www.wakapoetry.net/mys-x-1869/>)

The Black Pine is one of the most iconic elements of Japanese gardens. Often trimmed in a Bonsai form, these trees are seen as a direct link between the heavens and Earth. The needles or “candles” are trimmed to point upward toward the gods.

Japanese Black Pine
(Pinus thunbergii)
Kuromatsu 黒松
(クロマツ)

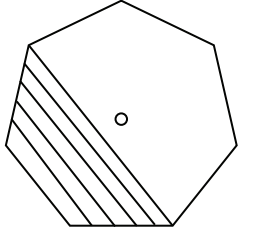

Leather Fern is not native to Japan, but was a substitute to better-fit Southern California’s climate. In Japan, ferns are used to help keep food longer.

Matake bamboo is a large bamboo that sprouts March-April. During this time, its shoots are edible. The leaves are used in Japan to wrap rice balls. The wood from Matake is functional, used for building and crafting. In accordance with the seasons, bamboo is not cut until Mid-November, at 10’ lengths. This time in the season is when the bamboo will not split uneven. In the JACCC garden, the bamboo forest represents the future of the Japanese American community; its strengths and flexibility.

(Pyrus kawakamii)
Nashi

Camphor
(Cinnamomum
camphora)
Kusunoki

Oil pressed from seeds of C. japonica, also called tsubaki oil or tsubaki-abura (椿油) in Japanese, has been traditionally used in Japan for hair care. C. japonica plant is used to prepare traditional antiinflammatory medicines. Camellias in the garden offer splashes of color and impermanence in the landscape.

Manyoshu Connection: MYS I: 54, MYS I: 56, MYS I: 73, MYS VII: 1262, MYS XIII: 3222, MYX XIX: 4152, MYS XIX: 4177, MYS XX: 4418, MYS XX: 4481 (<http://www.wakapoetry.net/mys-i-54/>)

Dwarf Mondo Grass is used in traditional Japanese gardens as a groundcover, especially in geometric settings.

Manyoshu Connection: MYS IV: 546, MYS XI: 2456, MYS XI: 2474, MYS XI: 2477, MYS XII: 2862, MYS XII: 3051, MYS XII: 3053, MYS XII: 3055, MYS XII: 3066, MYS XII:3204, MYS XIII: 3291, MYS XIV: 3577, MYS XX: 4484

Fortnight lily is not the same as the ones mentioned in the Manyoshu. It was substituted to better suit Southern California’s climate. Traditionally one would find Japanese lily (Lilium japonicum) and Mountain lily (Lilium auratum).

Manyoshu Connection: MYS VII: 1257, MYS VIII: 1503, MYS XI: 2467, MYS XVIII: 4086, MYS XVIII: 4087, MYS XVIII: 4088, MYS XVIII: 4113, MYS XVIII: 4115, MYS XX: 4369

The extract of the bark of Magnolia trees has been used for some 1,000 years in traditional Chinese and Japanese medicine for treatment of maladies ranging from asthma to depression to headaches to muscle pain. It is generally considered safe if taken orally and for the short term.

Manyoshu Connection: MYS XIX: 4204

Though not the same as the Juniper found in the Manyoshu, Miniature Japanese Juniper is often used as a groundcover in Japanese gardens.

Manyoshu Connection: MYS III: 446

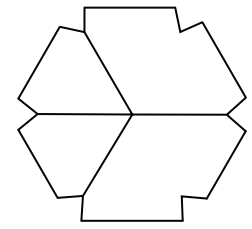

Azaleas have been long used as a festival flower. Modern Azaleas would not be in such wide production if it had not been for the work of Japanese gardeners and cultivators.

Manyoshu Connection: MYS II: 185, MYS III: 434, MYS III: 443, MYS VI: 971, MYS VII: 1188, MYS IX: 1694, MYS X: 1905, MYS XIII: 3305, MYS XIII: 3309 (<http://www.wakapoetry.net/mys-ii-185/>)

Evergreen pear is a substitute to edible pears commonly found in Japanese gardens. Nashi is the general word for pear.

Manyoshu Connection: MYS X: 2188, MYS X: 2189, MYS XVI: 3834, MYS XIX: 4259

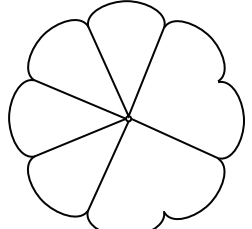

The oil of camphor trees is commonly used in industrial applications.

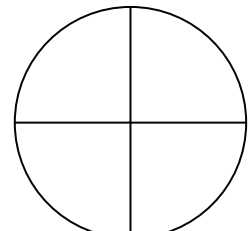

Japanese Maple
(Acer palmatum)
Kaerude,
Irohakaerude,
Kaede,
Yamamomiji

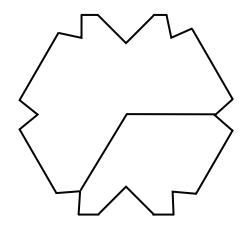

Donated
Persimmon

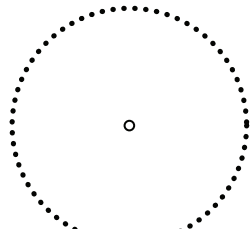

Japanese Elm
(Ulmus Davidiana
Var. Japonica)

Japanese
Pittosporum
(Pittosporum
tobria)

Japanese Holly
(Ilex crenata)

Crape Myrtle
(Lagerstroemia)

The maple leaves are packed around apples, root crops etc. to help preserve them. The wood from maple trees is used to make instruments as well as flooring. The leaves are also used to make bouquets in Japan.

Manyoshu Connection: MYS VIII: 1623, MYS XIV: 3494

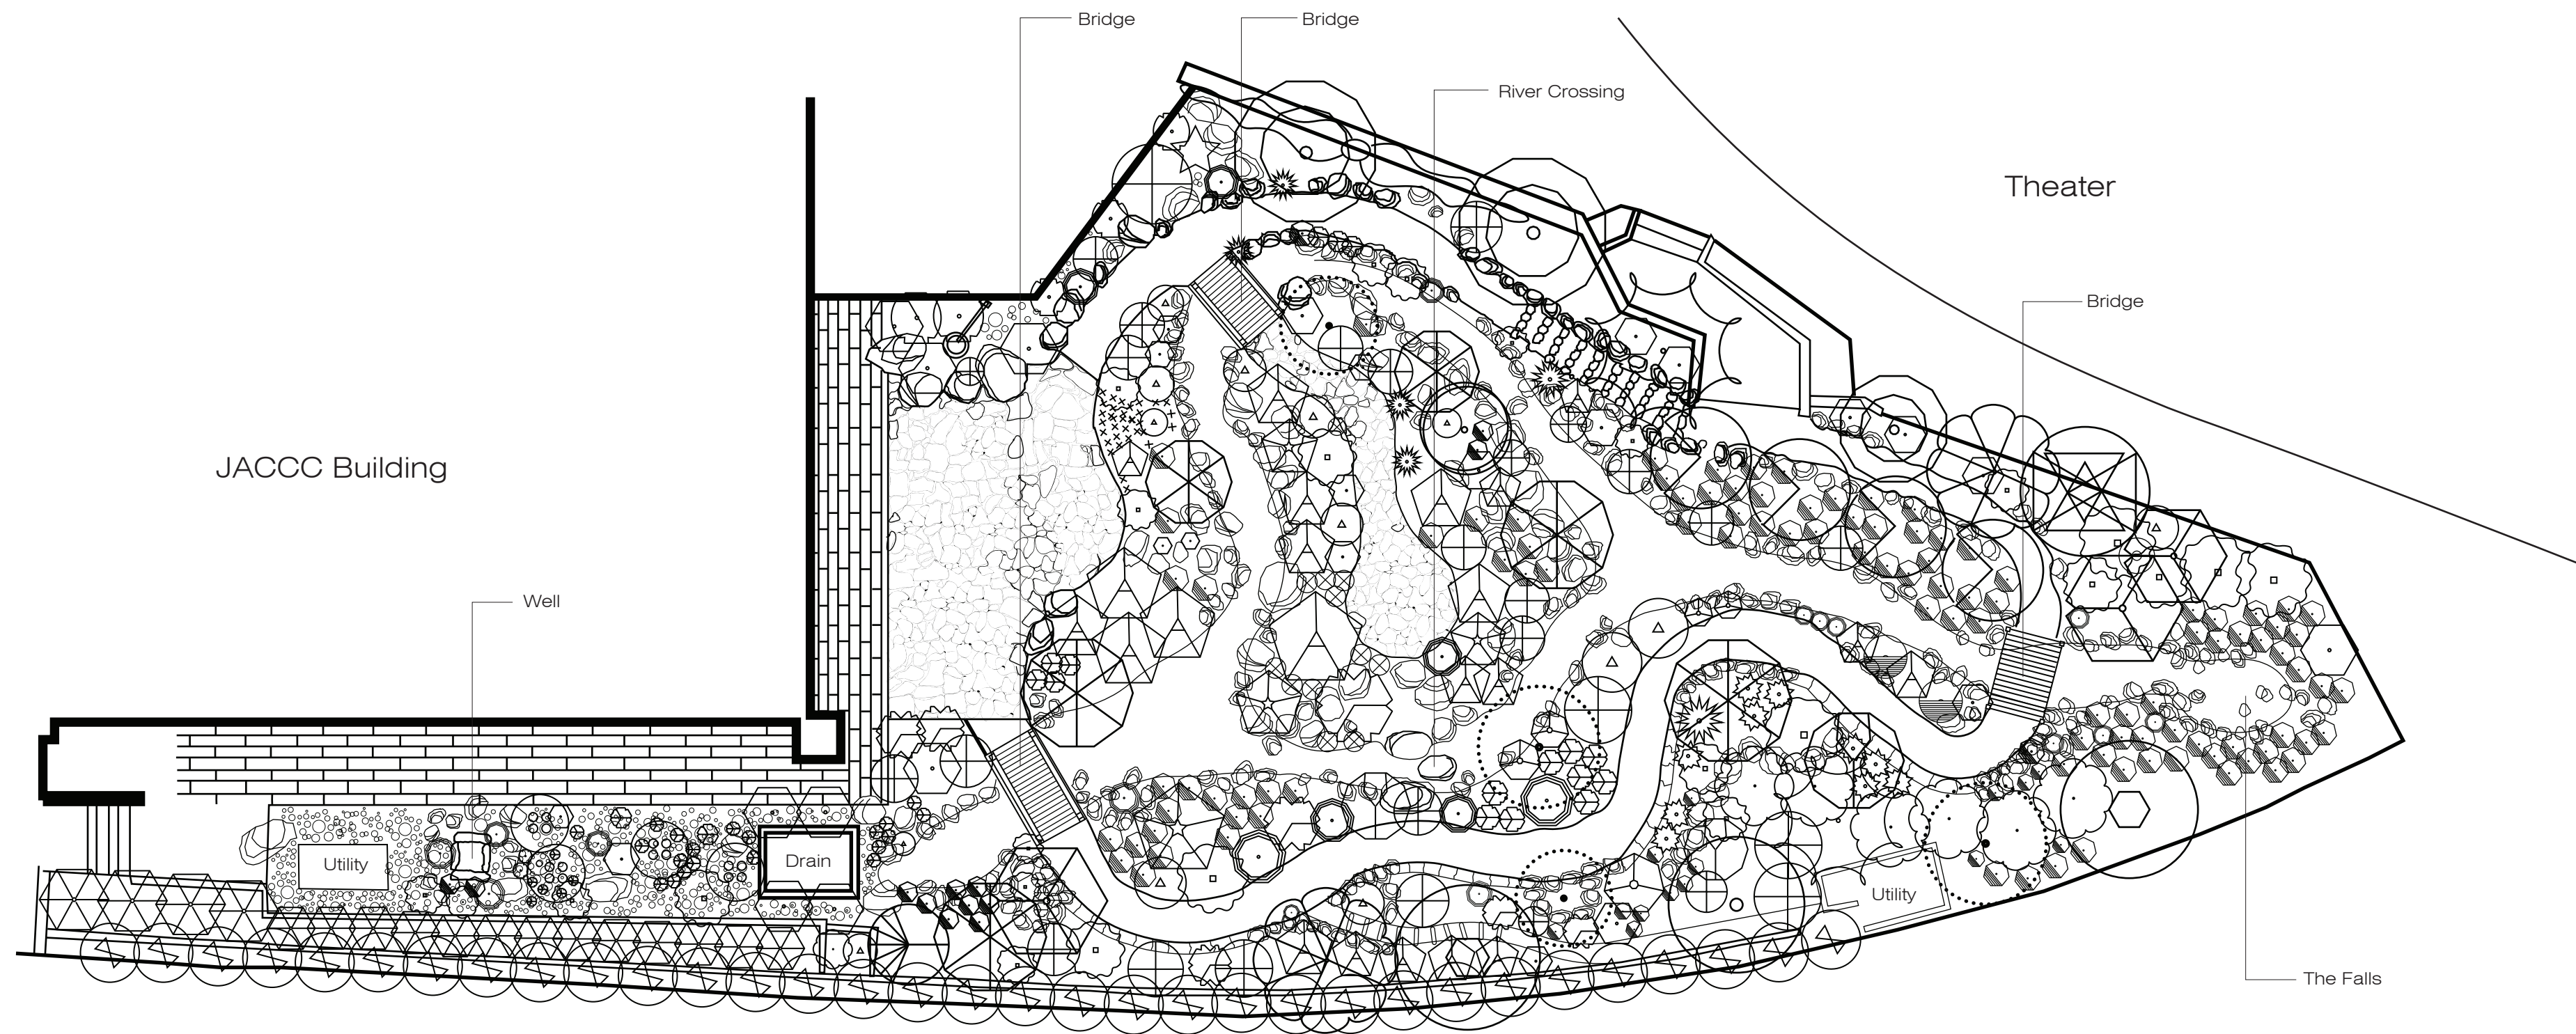

The persimmon tree was donated from the city of Hiroshima where the Atomic Bomb was dropped on August 6, 1945. This persimmon tree is from a survivor of that bomb. It was planted in 2013. Persimmon leaves are used to wrap food.

A native plant to Japan’s forests.

A native plant to Japan that is commonly used in ornamental applications.

A native plant to Japan. In Japan, people put a sardine’s head with hollies at the entrance of their houses because evils hate the smell of sardines and jagged leaves of holly plants. The smell and leaves protect them from evils. It is also “defense,” the meaning of hollies

In Japan, this tree is known as Saru Suberi, which means slippery. This is because of old folklore saying the bark is so smooth and slippery, that not even a monkey can climb it.

Garden Elements

Designer Takeo Uesugi sought inspiration from many famous Japanese gardens, especially the similarly-shaped Murin-an in Kyoto, Japan. Uesugi was faced with one major barrier: The Southern California climate. Though some modifications in the material had to be made, Uesugi followed the basic traditions of Japanese garden-making as laid out in the famous Sakutei-ki by Tachibana Toshitsuna, written in 1040.

Water, earth, rocks, and plants, the basic materials, were incorporated and arranged in a typically asymmetrical manner. Asymmetry is prized in the Zen concept of aesthetics, because it represents a process of seeking perfection, a humble but dynamic and living process which involves man as a part of nature in a unity of all things under heaven.

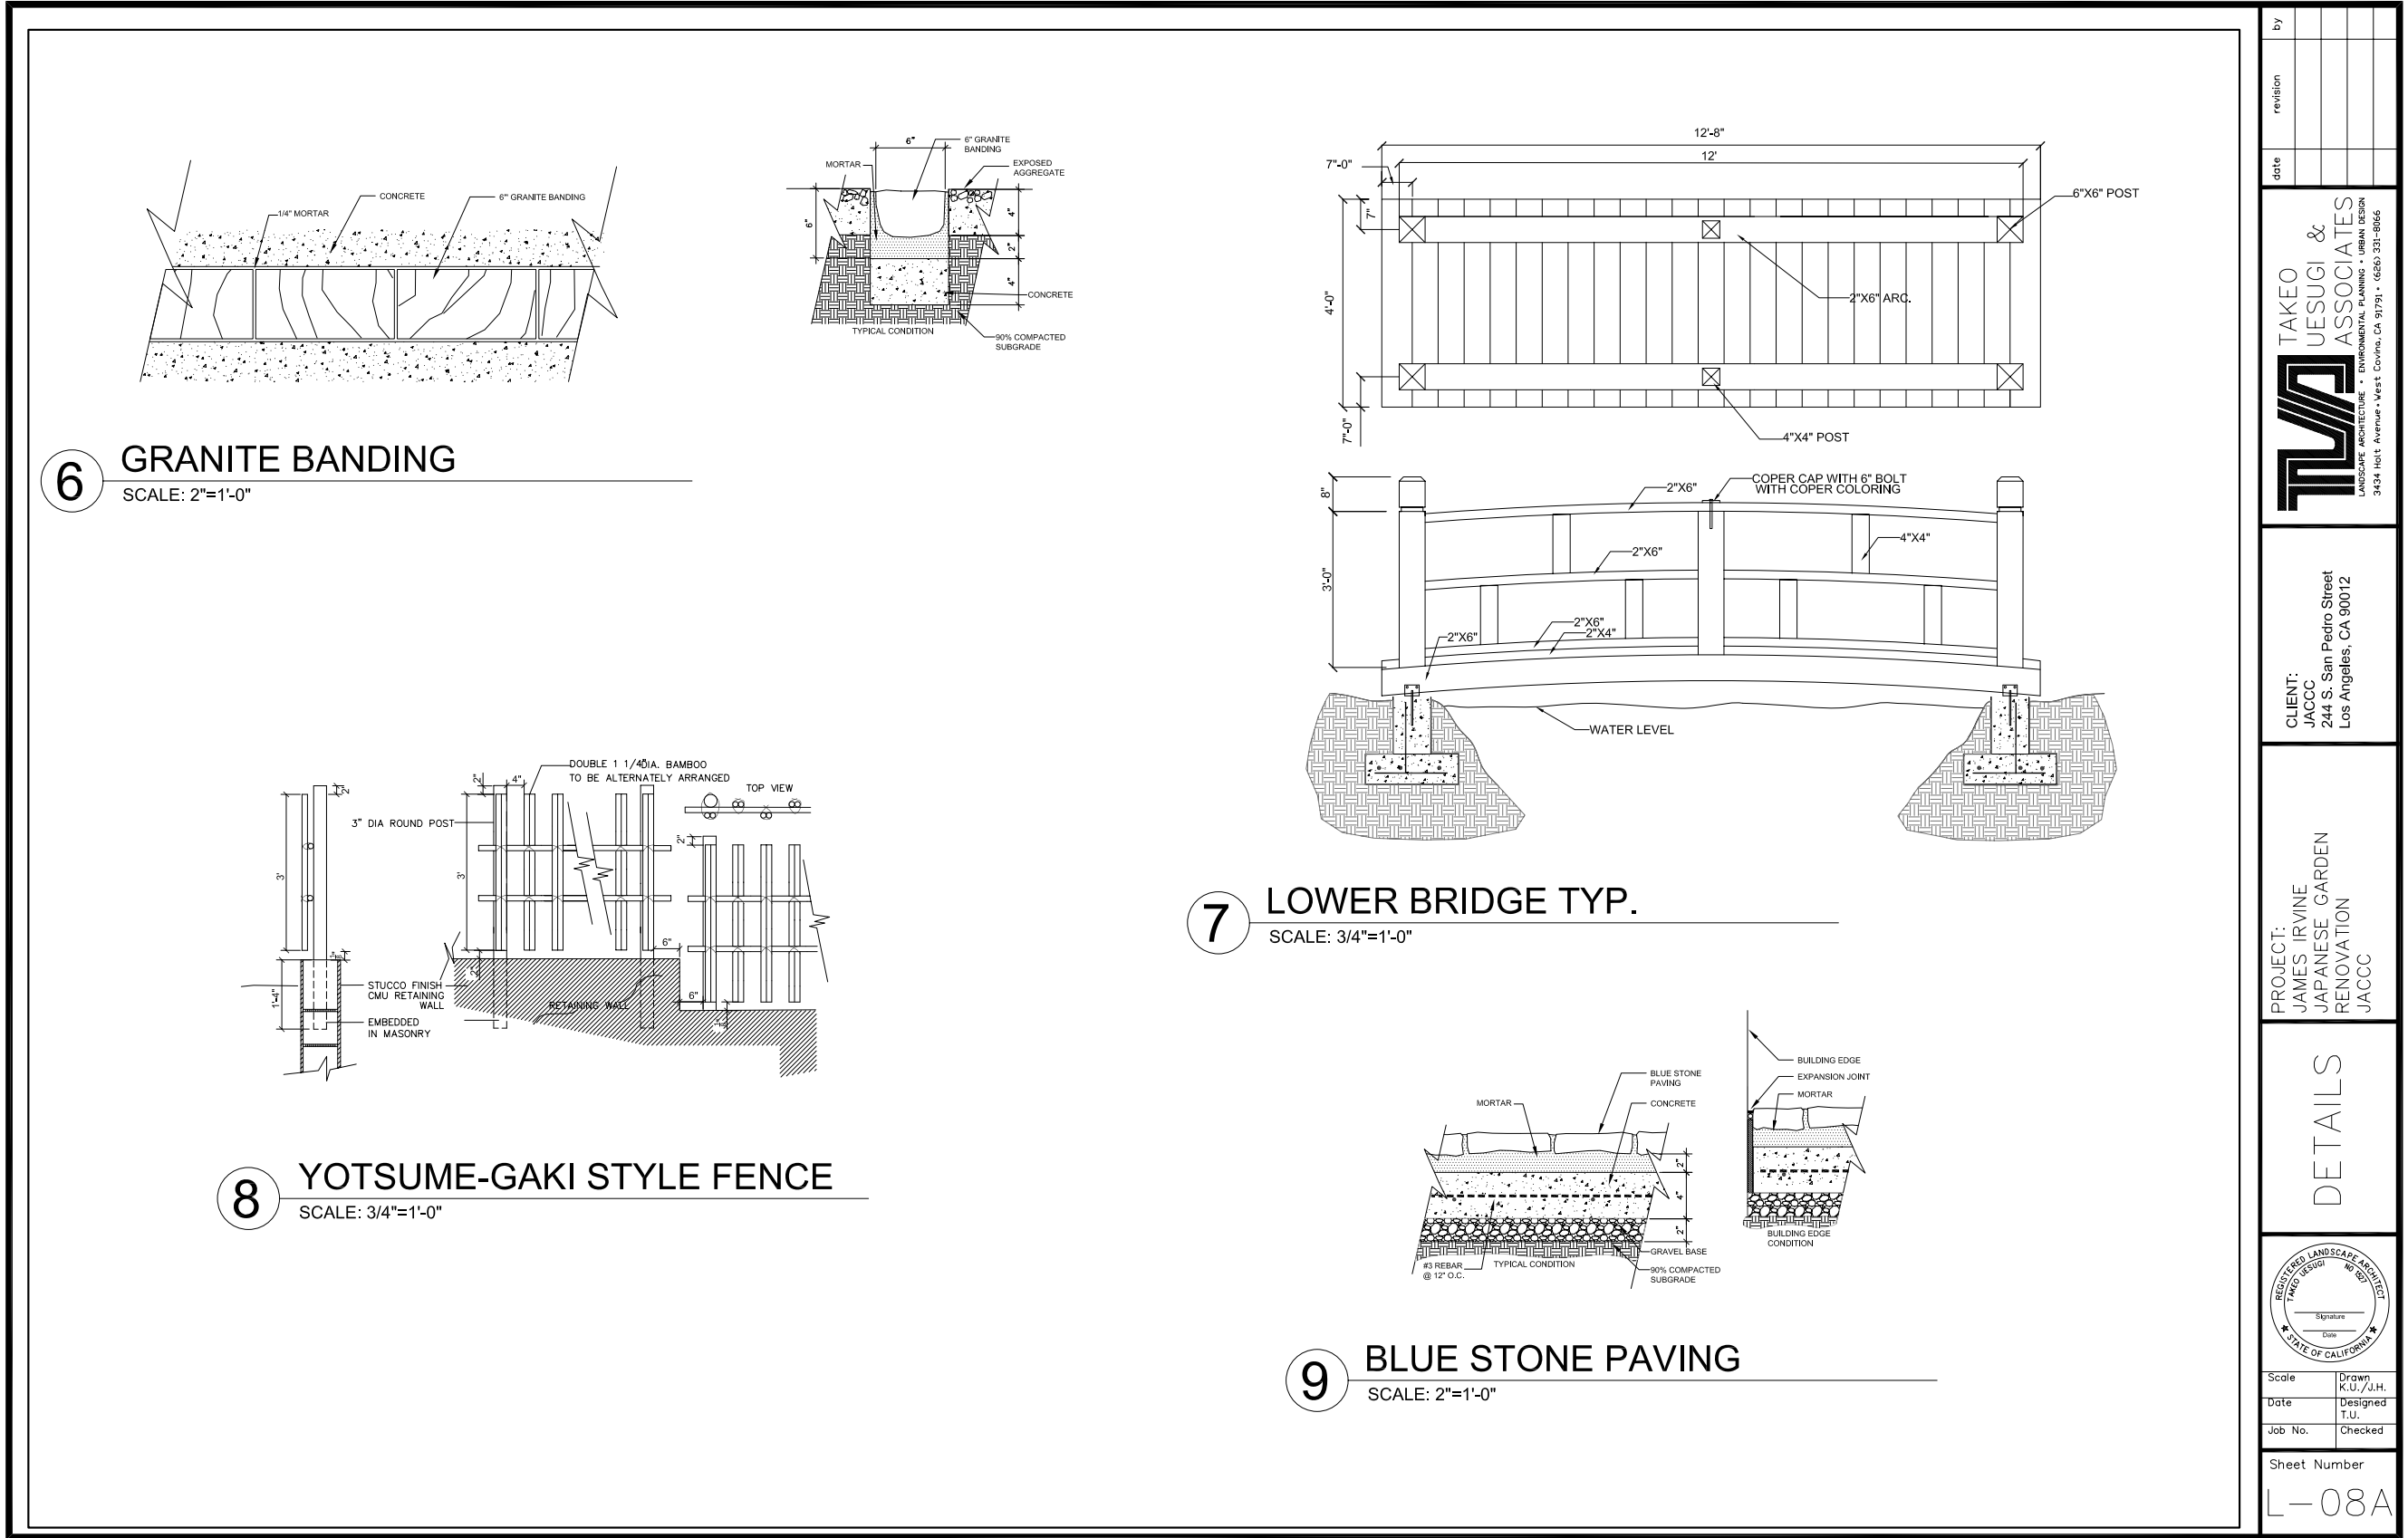

Asymmetry does not mean that the garden is without balance. The concept of Yin and Yang is seen in the rocks and gravel providing the more static, substantial and strong Yin motif, while Yang is best seen in the plants. Also important in Japanese garden design is the change with the seasons. In Japan, there are 72 microseasons, unlike Western's traditional 4. Evergreen elements bring timeliness to the garden, while flowers from Azaleas, Camellias, Crape Myrtles, Cherries, and Magnolias provide counterpoints of color with the ever changing seasons. These seasons not only determine what people wear and eat in Japan, but also tell exactly when certain plants should be planted, trimmed, and in the case of gardens, viewed.

The JACCC Japanese garden is aligned with the full moon around the 27th of September each year. During this time, a Noh performance stage is set up in the garden and a special exhibit is hosted. The garden has transformed greatly since its original installation. The JACCC's garden was originally designed to be a viewing/ meditation garden, similar to those seen in the Kamakura period (1185-1333). As the JACCC's needs changed, a renovation took place from 2006-2007 in the garden adding an ADA accessible path and performance area at the center of the garden. The garden as it is today is a functional garden, meant to enjoy a performance, music, or other activity in.

The Stream

Many Buddhist temples in Japan seek nearly all their necessities from nature, and often go by a rule of "Ask the mountain for the menu." Dr. Uesugi did just that, and made several sketching and rock-hunting trips to the Mt. Baldy area, seeking direct inspiration in raw nature for the shape of the stream through the garden, which symbolizes the achievements and aspirations of the Japanese Americans.

The 170-foot cascading stream runs along the perimeter of the garden walk, and gives the garden its Japanese name, Seiryu-en or Garden of the Clear Stream. The upper rushing falls represent the struggles of the immigrant Issei generation against harsh economic realities and prejudices in a hostile land. In the middle cascades, the stream divides, expressing the conflicts experienced by the second generation Nisei, who volunteered out of American concentration camps to prove their loyalty to America during World War II. Finally, the stream becomes a gentle murmur, ending in a calm pond, symbolic of the hope for a peaceful world for the Sansei and ensuing generations.

Construction documents detailing the construction of the JACCC garden elements.

The Path

A winding path of decomposed granite and strategically-placed stepping stones invite the visitor through the garden, offering a different and pleasing vista at every pause. There are a total of 4 stream crossings, with 3 bridges and 1 set of stepping-stone boulders. The bridges are constructed mixing modern principles with traditional aesthetics. Similar to the intention of the original design, the path was masked behind rolling swaths of shrubs.
